- Simple intuitive GUI
- Simultaneous playback and live video
- Graphical time/date search
- Multi-camera/Multi-view capability
- Smooth playback and faster video search
- Motion or time-lapse recording
- Full-screen playback

Make recording images simple with the industry's only on-camera megapixel NVR solution - IQrecorder. This software allows you to easily record images to your network server, network attached storage (NAS) or on-camera using compact flash. IQrecorder is designed for stand-alone or small installations and includes many sophisticated features such as simultaneous playback and live viewing, flexible scheduling, improved digital zoom on recorded images, full screen viewing, DVD-like controls, and a graphical time/date search. With simple installation and operation, you can eliminate the need to load client software to playback video.

IQrecorder lets you monitor live action while reviewing recorded megapixel images and the all new full screen playback window is available with looping video and a complete set of DVD controls to navigate recorded video. It is ideal for small applications where simplicity, ease of install and low cost of ownership is paramount.
